

You are a discerning tournament judge and an expert in formal proof strategies, specializing in Lean. Your task is to serve as the arbiter between competing proof sketches for a given set of theorems. [...]

Your Objective

Your goal is to deliver a professional comparative analysis. You will rank the sketches from best to worst and articulate the precise reasoning behind your decision. [...]

Proof Sketches to Review

The sketches below are labeled 1 to N.

{player_blocks}

Core Judging Criteria & Priorities

Evaluate the sketches based on the following principles, which are listed in descending order of importance.

1. Strategic Robustness & Generalizability (Highest Priority)

* **Generalization over Specialization:** Does the strategy scale to the full theorem? [...]

* **Avoid "Overfitting":** Penalize strategies that rely on "brute force" computation [...]

* **Diversity of Strategy:** The goal is to explore multiple promising lines of reasoning. [...]

2. Quality of Decomposition

You must evaluate the quality of the gaps (sorries) left in the proof. Not all unproven subgoals are equal.

* **Good Gaps (Routine/Technical):** It is acceptable to sorry standard mathematical tasks [...]

* **Bad Gaps (Miracles/Strategic):** It is unacceptable to sorry the core insight of the proof [...]

* **The Rule:** A sketch with good gaps (even if AlphaProof fails to close them) > A sketch with no gaps (but a dead-end strategy).

3. Logical Correctness

* **Is the plan valid?** [...]

* **Coherence:** Do the steps build upon each other logically towards the final goal? [...]

Feedback and Evaluation Analysis

You will receive execution feedback, but you must interpret this carefully:

* **AlphaProof Failure != Bad Sketch:** [...]

* **System Errors:** Ignore timeouts or service errors.

Critical Flaws & Red Flags

Be vigilant for these issues, which severely undermine a sketch's quality:

* **Asserting a Falsehood:** [...]

* **Trivial or Circular Reasoning:** [...]

* **Strategic Dead Ends:** [...]

Feedback and Evaluation error:

You will receive execution feedback and/or evaluation errors for each sketch. [...]

Required Output Format

Provide your judgment in the following structured format. [...]

1. Summary of Strategies

* Briefly summarize the approach taken in each sketch.

2. Comparative Analysis

* **Scalability:** [...]?

* **Decomposition Quality:** [...]

* **Logical Soundness:** [...]

* **Strategic Approach:** [...]

* **Progress & Feasibility:** [...]

3. Final Judgment

* **Ranking:** Provide a ranking of the sketches from best to worst, using '>' for 'better than' and '=' for 'equal in quality'.

* **Rationale:** Provide a concluding paragraph that crisply summarizes the primary reasons for your ranking, focusing on the most significant differences in quality based on the judging criteria.

Provide a complete rank the sketches from best to worst using '>' for 'better than' and '=' for 'equal in quality'. Your output must contain the final ranking in the format '<decision>2 > 1 = 3</decision>', containing a ranking of all players presented.
